

The graph above shows the actual ecological flow data-the amount of water left to the Paravani River from Paravani HEPP for May 2020.

The increased flow for the dates 7th, 8th, 9th, 10th, 11th and 12th of May were due to seasonality effect, when the amount of water at intake was more than the Plant's capacity.

The increased flow for the dates 23th, 24th, 25th, 26th and 27th of May was due to stops at generation, when no water was drawn to intake.

The minimum permitted ecological flow of Paravani HEPP is 1,75 m3/sec.
